

Our fabrication team specializes in:

- » HVAC piping
- » Industrial and process piping
- » Refrigeration and low temperature piping
- » Equipment support steel
- » Custom pump sets and enclosures
- » Boilers and chillers
- » Cooling towers and heat exchangers

Our in-house fabrication team produces hundreds of feet of pipe a day.

Utilizing a modern, fully equipped pipe fabrication facility, EMCOR Services Northeast provides a variety of pipe fabrication services. Our expert fabrication team can design, spool, fabricate, install, and service virtually any piping and HVAC system.

Let our state of the art facility work for you

Our 6,500 square foot pipe fabrication facility can produce hundreds of feet of HVAC pipe each day for commercial or industrial applications.

We can either measure existing site conditions in a design-build environment or take generic engineering models in Autodesk Revit or AutoCAD MEP and apply piping and HVAC system layouts with real manufacturer geometry and specifications.

Our design to fabrication workflow allows for efficient collaboration and model generation that easily transfers to fabrication in our facility.

Continuous quality monitoring for all your projects

Our fabrication experts secure pipes with welded, grooved, soldered, brazed, or screw connections and work with steel, copper, plastic, stainless steel, and a variety of other materials.

Also, by combining technology-based delivery with exceptional customer care, our team is able to consistently monitor its pipe fabrication environment. This results in improved worker safety, minimized on-site equipment downtime and jobsite footprints, and maximized product quality and labor efficiency.

To see how our pipe fabrication facility can assist with all your fabrication needs, contact us today.
