### » Central Plant Optimization

### » Utility Rebate Analysis

EMCOR Services Northeast is one of the largest independent service contractors in metropolitan Boston. We deliver complete mechanical contracting services, from engineering, design, and installation to maintenance, renovations, and retrofits.

Whether you need to improve efficiency, develop a stronger business continuity plan, or keep your systems running at optimum levels every day, you can depend on our blend of high-quality capabilities and cutting-edge technology to meet your most vital requirements.

## Consistent Comfort, Efficiency, and Productivity for a range of Environments

On any given day, our maintenance and service teams may be working in a mission-critical data center, a mixed-use space with apartments and retail, a state-of-the-art biotech laboratory, or a busy office building. Whatever the environment or system, we have the experience needed to provide smooth, reliable, non-disruptive service necessary to help maintain comfort, productivity, and maximum energy efficiency.

## Helping Save Energy and Maximize Building Operations

We offer a variety of services designed to assess the unique needs of your facility, in order to help promote lower energy costs and superior operation. Whether we're analyzing your overall systems or measuring the effectiveness of specific components, the goal is always the same—to support facilities that function better, at lower cost, over a longer period of time. Specifically, retro-commissioning studies can help keep buildings functioning more smoothly, while reducing ownership and operating costs, and environmental air-quality monitoring can help facilities meet industry standards that promote employee health and productivity.

## Preparing Your Facility for the Unexpected

We work closely with clients and other building stakeholders to develop business continuity plans that can help you minimize risk, while enabling rapid return to operations in the event of a disaster. Once the plan is in place, we help you effectively monitor and maintain it. The result is greater safety for your people, increased asset protection, faster operations recovery, and a more secure future for your company.

# Expertly Managed, Monitored, & Maintained Facilities— for Greater Peace of Mind.

## A Team of True Facilities Experts

We employ a team of licensed and certified technicians who bring years of experience, extensive service expertise, and a thorough knowledge of HVAC, plumbing, building automation, and other systems to every assignment. By providing constant training and development opportunities, we stay up to date on the industry's latest innovations. It all adds up to the expertise needed to keep buildings maintained in peak condition, ensuring dependable operation and full lifecycle value.

## The Latest in Maintenance Management Technology

Our integrated service delivery network is one of the most technologically advanced in the industry. Through a computerized maintenance management system, our field technicians are seamlessly connected to our office and the needs of your facility, helping ensure fast problem resolution and disciplined maintenance. The result is the rapid response and up-to-date information you need for dependable operation and efficient facility management.

## Customer Solutions Centers

As a part of EMCOR Building Services, we are connected to EMCOR's Customer Solutions Centers (CSCs). These state-of-the-art operations centers unite technology, integrated work order management, and facilities expertise to serve clients across the country. The CSCs process over a million work orders annually for hundreds of thousands of facilities and are ready to assist our clients 24/7/365.

## Industry Leading Facilities Services

When you work with EMCOR Service Northeast, you work with an industry leader, offering a range of competitive advantages, including:
